

AVALON

Illuminated Mirrors

Classic Elegance, DeLighting Technology!

The Avalon range of illuminated mirrors provides perfectly balanced lighting for your reflection and will complement any stylish bathroom.

Etched 'light-window' panels in the mirror itself create the distinctive Avalon style.

Built-in Dimmer function: Depress and hold the dimmer switch (located underneath the mirror) to adjust the lighting level up or down. Simply release the switch to set the level! The memory function will remember this level until you choose to alter it. This feature also doubles as an off/on switch.

Diffused 'light-window' panels on the sides of the Avalon also allow light to be emitted sideways to generally illuminate the bathroom.
